

Dear Mrs. Cessar of Providence Heights Alpha School,

Thank you so much for preparing me for the challenges of high school. It was a breeze having to adapt from 7th grade biology to freshmen biology. While many other students were stupefied by new concepts, all that I had to do was apply the concepts that I had learned in 7th grade. For example, we just recently had a test on cell growth and division. I brushed up on the material while we learned it, and I didn't have to study for the test at all. In an even greater way, you strengthened my ability to apply scientific concepts to real world problems. I cannot even begin to explain how useful these skills are going to be in IB sciences and PJAS+PRSEF. I greatly appreciate all the other important skills that I have learned, such as public speaking and lab reports. Again, I cannot begin to thank you enough.

- Jake
